

pebble

Build Guide

mindfull iOS App

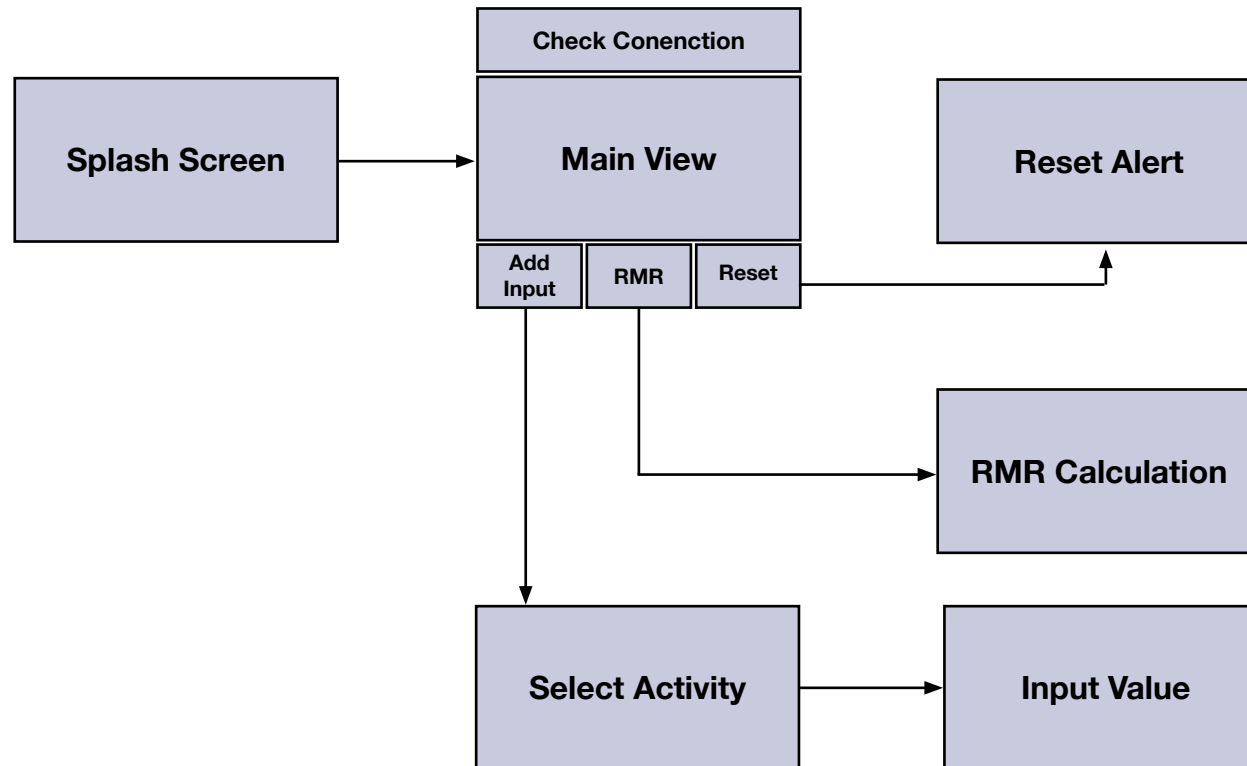

Design and Implementation

App is not yet available in app store, but is fully functional.
Including all flows, and pebble connectivity. Demo is available
upon request.

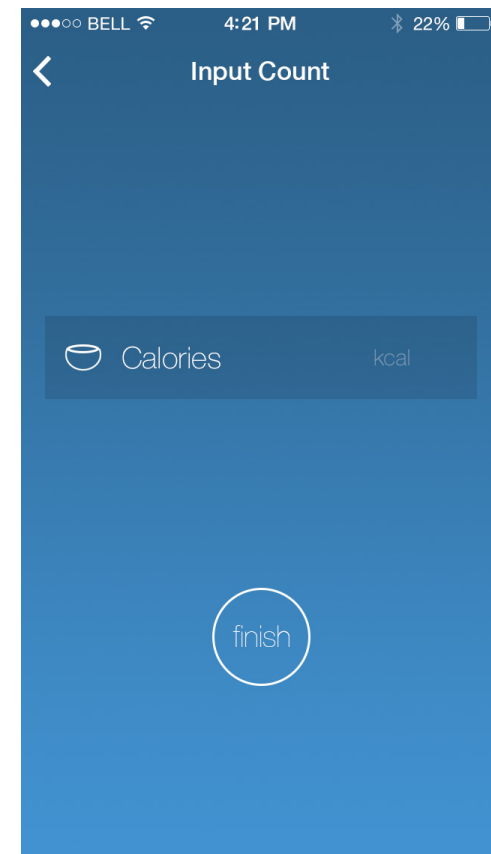

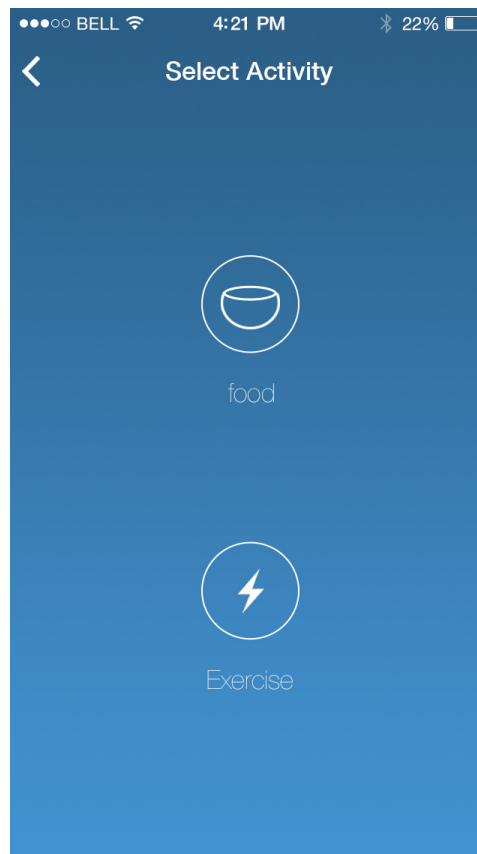

Prepared by: Alan Hsu

Version 1.0

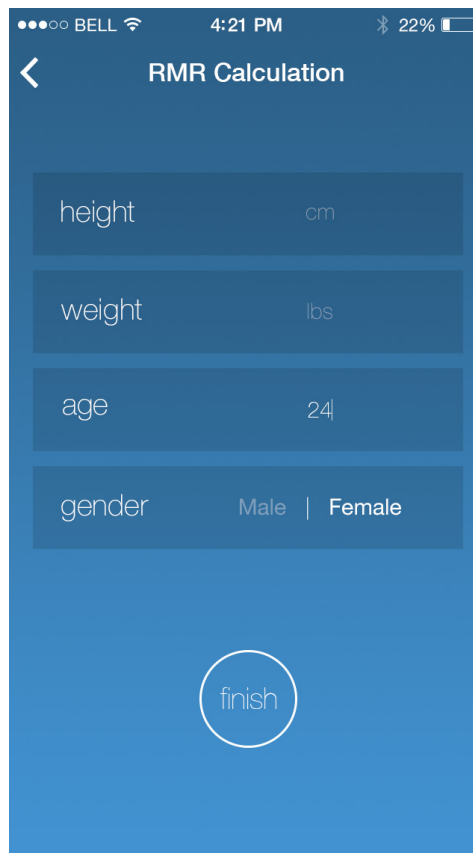

Information Architecture:

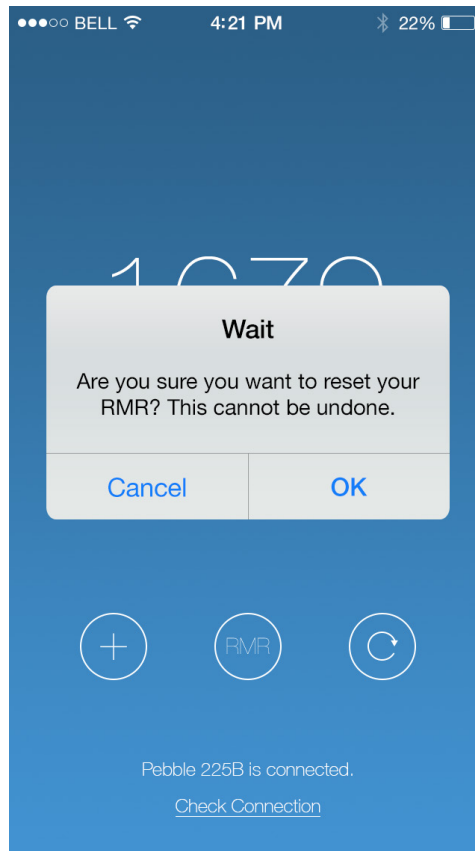

Activity Input

RMR Calculation

Calorie Count Reset

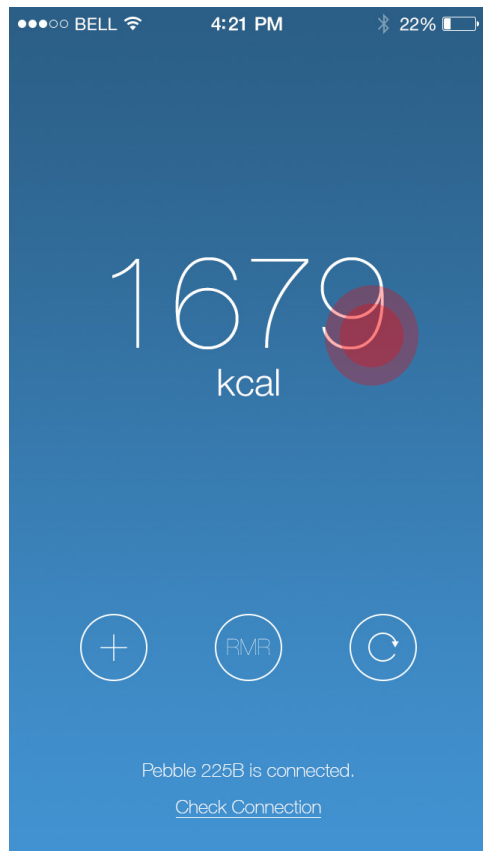

Pebble Connection

Description:

Tap on the "Check Connection" button allows the app to ping the pebble application to show current status of the connection. Connected apps will display the watch name, and error message will indicate that no watch is currently connected.

Pebble Sync

Description:

Double Tap on the calorie count label allows the app to communicate with app running on pebble. All data is persistent both on the iOS application and on the pebble (C based application.)
